

HARRINGTON SEMI FLUSH INSTALLATION INSTRUCTIONS

These instructions are provided for your safety.
Please read carefully before commencing work and retain for future reference.

SAFETY INFORMATION

- * It is recommended that a qualified electrician is used to install this product.
- * If you are in any doubt consult a person competent to give advice on the installation of electrical equipment.
- * This fitting should be fitted in accordance with IEE Wiring Regulations and the Building Regulations
- * To prevent electrocution switch off at the mains supply before installing or maintaining this fitting. Ensure other persons cannot restore the electricity supply without your knowledge.
- * To avoid damage to concealed wiring during installation, establish the direction of the supply cable before drilling fixing holes.
- * This fitting is Class 2=  and should be fitted to a lighting supply protected by a 5 amp fuse or equivalent circuit breaker.
- * When changing the bulb, always switch off at the mains and allow the old bulb to cool down before handling. Dispose of used bulbs carefully.
- * Place this product out of direct sunlight.

INSTALLATION

1. Ensure the house electricity supply is off at the fuse board.
2. Before removing the existing fitting, carefully note the position of each set of cables. If there are loop in cables that are not connected to the light these must be terminated in a separate terminal block not connected to the fitting.
3. Remove mounting bracket from fitting by removing the two screws located on either side of the ceiling cup. Using the bracket as a template, mark and then drill the fixing holes in the ceiling. Ensure that the holes are drilled into a joist or other suitable mounting and not just the plaster.
4. Carefully remove the glass panels from their protective packaging. Next, carefully lower glass panels into the metal shade ① The edges of the glass are inserted behind the metal vertical retaining panels on the inside of the metal shade frame ② Keep the glass as vertical as possible during assembly into the frame whilst also taking care not to allow the glass panels to drop in to the frame as this may cause damage.
5. Gently lower the lamp holder section onto the shade frame. The three metal arm braces on the lamp holder section need to be aligned with the three fixing points at the top of the shade frame. Once the fixing holes are aligned, fit the small metal retaining plates ③ over each of the fixing holes and under the brace ④ Insert the three thumb screws ⑤ through the brace, retaining plates and into the pendant shade as shown below. Fully tighten the screws to secure in place. This step is best performed by resting the product on a floor or other covered flat surface and carefully tilting the shade to one side to help align the fixing holes. Ensure a good connection of mechanical parts is made before installing on to the ceiling.
6. Fix the mounting bracket to ceiling using suitable fixings. ⑥ **Take care not to damage wiring.**
7. Use a screwdriver to lever open the connector block housing and feed supply cable through the rubber sleeve. Whilst supporting the weight of the fitting, make electrical connections as follows: ⑦
 - Connect the supply live (normally brown or red) to fitting live (marked “L”) on the terminal block.
 - Connect the supply neutral (normally blue or black) to fitting neutral (marked “N”) on the terminal block.

Please note: No earth should be fitted to any part of this light if any earth wires are present please ensure that these are terminated into a separate terminal block (not supplied) to ensure that continuity of the earth for the rest of the house is maintained.

LAURA ASHLEY

IL4686

8. Attach the fitting to the mounting bracket using the retaining screws removed earlier. **Take care not to trap wires in the process** ⑧
9. Fit the bulbs: Type and wattage as indicated on the fitting. **The wattage indicated must not be exceeded** ⑨
Note: The main vertical lamp holder stem has an in-line adjustable knuckle joint. This can be used to centralise the lamp holders inside the shade.
10. Switch on the electricity supply at the fuse board.

GENERAL INFORMATION

This fitting is designed for internal use only and must be fitted to a DRY SURFACE as any dampness in plaster or paint can damage the finish. **Do not use polish or abrasive cleaner - just a soft dry cloth.**
